The interventions are medically accurate and age appropriate, and based on evidence-based research. It is based on three theories: 1) Social Learning - Individuals will avoid problems, if they can observe appropriate and inappropriate behaviors, and role play situations. 2) Health Belief Model - Individuals will take preventive measures, based on the seriousness of the problem and the costs, and benefits of the action needed. 3) Self Efficacy - Individuals will choose an appropriate option to be successful (e.g., will choose abstinence or condom use).
